

Attachment "B"

Amendment to a Paragraph of the Specification

Please amend the paragraph of the Specification at page 10, lines 12-19, as follows:

B1
Figure 2 shows two means 6 designed to feed the gas phase with oxygen (oxidizer). These means are constituted by blowpipes. Within the structure of each of said blowpipes 6, there is provided a circuit ~~16~~ 61 for circulating a cooling fluid. The blowpipes which are cooled in this way withstand corrosion better. It is recalled at this point that they are advantageously cooled by circulating a "hot" cooling fluid (i.e. a fluid maintained at a temperature which is higher than the dew point of the gas phase through which ~~said~~ they pass), thereby preventing any condensation on the outside surfaces thereof.
